### **Easi File Saves Construction Companies Space and Time**

Irvine, CA-----As the cost of office space continues to skyrocket, office managers are looking for ways to conserve floor space. This trend has caused a recent increase in sales of **Easi File** document storage systems to construction, architectural and engineering companies nationwide. “We have seen sales increase significantly over the past year,” says Brad Barrett, president of the Irvine, California-based storage and filing systems company.

“Most standard filing and storage systems found in office supply stores are designed for letter or legal-size documents,” says Barrett. The large drawings, maps and charts required by construction and building engineers have been stored mainly in flat files or “pigeon holes” in the past.

## Add One –Easi Files

“However,” he explains, “one Easi File vertical file stores the same number of documents as three, five-drawer flat files, and requires 75 percent less space. Office Administrators and Project Managers can experience a 75 percent saving in time spent retrieving and storing drawings, as it typically takes less than 10 seconds to find and remove a document,” he adds.

The popularity of **Easi Files** is growing in construction companies. Lyndl Hill, Co-owner of Hills Land and Construction, “We bought our first one just a while ago, and liked it so well that we went out and bought another one.”

Banker’s Development, LLC is implementing its new Easi File system this month. According to company president Dave Meinhardt, “What we have done with Easi File so far has been helpful. We are re-organizing our office and it is helping with the organization process,” he explains. “Once we are up to speed, we will consider adding additional files.”

Frieda McCallum, Document Control Administrator for Interface Displays and Construction, recently purchased the Easi File system. “Although our **Easi Files** are new, I have already filled them and they are working perfectly. We are pleased the **Easi Files** are so large, because we replaced the flat file system that we had, and I had several old documents that I did not want to discard,” she said.
